07. Bobsleigh Peak

Nova Cup · upgrade blueprint · src/kart/tracks/bobsleigh.ts

Where it is now

3.3 km: summit village, ski jump and glide, ice chute or forest trail, frozen lake or round it, rack railway. Lap 2 snowballs; last lap blizzard and cracks.

What is wrong

The chute is a normal road with walls; the ice barely changes the driving.

Core mechanic

Ice and banking. Low grip across most of the track, so you steer with weight and early inputs. A real bobsleigh chute with curved walls: riding high round the banked bends is faster and the walls catch you.

Signature moments

- The bobsleigh chute: a long run of banked bends and a wall-ride section.
- The ski jump with a proper glide.
- The frozen lake: cracks change which ice is safe each lap.

Layout changes

- Rebuild the chute with curved walls you can drive on.
- Keep the ski jump, village and rack railway.

Lap changes

- Lap 2: snowballs roll across the run.
- Last lap: the lake breaks up; you hop between floating ice sheets.

Engine work needed

- Driving on curved walls (banked chute).
- Low-grip surface model.
- Moving road pieces: floating ice sheets.

Rivals

- Rivals ride high in the chute bends.
- Rivals pick safe ice.

Done when

- Laps of 50-60 s for a good driver; all 3-lap test races finish with no errors.
- Rivals use every route and the core mechanic, with no more than 2 rival falls per race.
- The core mechanic is in play for at least half the lap, not just one set piece.
- A blind test: a screenshot or a 10-second clip of this track could not be mistaken for any other track.
- Item rows are never on the start line; nothing solid blocks a road by accident.
